

LC OptiCam[®] Pre-Polished Fiber Optic Connectors

SPECIFICATIONS

LC OptiCam Pre-Polished Connectors with rear pivot latch shall be ANSI/TIA-604-FOCIS-10 compatible and contain a factory-terminated fiber, eliminating field polishing and adhesive. LC pre-polished connectors shall have an average insertion loss of 0.3dB per mated pair for multimode and singlemode fiber. LC pre-polished connectors shall captivate fiber and buffer in one action allowing for up to two re-terminations with no degradation in performance.

KEY FEATURES AND BENEFITS

Factory pre-polished fiber stub endface:	Eliminates inconsistent and time-consuming field polishing to deliver required optical performance; reduces termination time (less than half the time of field polish connectors) and the number of installation tools required
Dual cam design with fiber and buffer clamps:	Secures both the fiber and the buffer during the camming step to facilitate consistent termination results; reduces the termination time compared to conventional termination methods
PATENTED	Allows up to two re-terminations to achieve optimum termination results; reduces the number of rejected connectors and terminations to provide yield rates approaching 100% for lower installed costs
Non-optical disconnect:	Maintains data transmission under tensile loads for jacketed cable
Mechanical cable retention:	Consistently provides higher than industry standard cable retention; requires no adhesive, speeding installation
Robust design:	FOCIS-10 compliant design with rear latch for easy deployment; operating temperature range of 32°F to 140°F (0°C to 60°C)
OptiCam[®] 2 Termination Tool:	Provides calculated insertion loss value at the time of termination, improving termination yields and reducing installed costs.

APPLICATIONS

LC fiber optic connectors are widely used in fiber optic backbone and horizontal applications for high-speed data transmission. Typical applications for LC OptiCam Connectors include maintenance or emergency restoration of fiber networks and retrofit/initial install in both behind-the-wall (BTW) and in the permanent side of panelized interconnect and cross-connect. LC OptiCam Connectors eliminate the need for end face polishing and adhesive providing easier, faster installation, especially in remote areas and confined spaces.

The hand-held 2 OptiCam Termination Tool gives installers the flexibility to terminate in very close proximity to the application without having to switch tools or find benchtop space.
