

As digitalization is sweeping the world, extensive connections, explosive growth of data, and booming intelligent applications are profoundly changing the way we live and work. Enterprise services are going digital and moving to the cloud, which promotes the transformation of enterprise networks while bringing greater challenges to network security. As threats increase, unknown threats are ever-changing and highly covert. As users' requirements for security services increase, performance and latency become bottlenecks. With mass numbers of security policies and logs, threat handling and O&M are extremely time-consuming. As the "first gate" on network borders, firewalls are the first choice for enterprise security protection. However, traditional firewalls can only analyze and block threats based on signatures and therefore are unable to effectively handle unknown threats. In addition, the effectiveness of threats depends on the professional experience of O&M personnel. The single-point, reactive, and in-event defense method cannot effectively defend against unknown threat attacks, let alone threats hidden in encrypted traffic.

With new hardware and software architectures, Huawei HiSecEngine USG6500F series, in either desktop or 1 U models, are next-generation AI firewalls that feature intelligent defense, outstanding performance, and simplified O&M, effectively addressing the preceding challenges. The USG6500F series uses intelligence technologies to enable border defense to accurately block known and unknown threats. Equipped with multiple built-in security-dedicated acceleration engines, the USG6500F series firewalls support enhanced forwarding, content security detection, and IPsec service processing acceleration. The security O&M platform implements unified management and O&M of multiple types of security products, such as firewalls, anti-DDoS devices, reducing security O&M OPEX. In addition, the USG6500F-DL series support the LTE function, which can be used to implement flexible, efficient, and fast network deployment in remote areas or mobile office scenarios.

# 1 Product Highlights

# **Excellent performance**

By leveraging fresh-new hardware and software architectures, HiSecEngine USG6500F series AI firewalls dynamically allocate resources to service modules through the adaptive security engine (ASE), maximizing resource utilization and improving overall service performance. For core services, the HiSecEngine USG6500F series also supports network processor (NP), pattern matching, and encryption/decryption engines. These engines greatly improve short-packet

2024-11-18 Page 1 of 18

forwarding, reduce the forwarding latency, and enhance application identification, intrusion prevention detection, and IPSec service performance.

### Intelligent defense

HiSecEngine USG6500F series AI firewalls provide content security functions, such as application identification, IPS, antivirus, and URL filtering to protect intranet servers and users against threats.

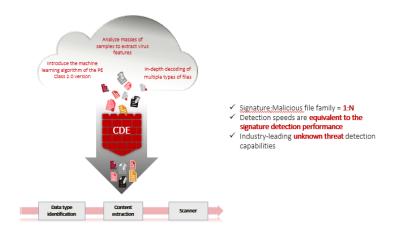

Traditional IPS signatures are manually produced through analysis, resulting in low productivity. Also, the accuracy of the signatures depends heavily on expert experience. Huawei innovatively enables the IPS signature production on the intelligent cloud by adopting intelligence technologies and utilizing expert experience. Such an intelligent mode helps increase the signature productivity by 30 times compared with manual production, reduce errors caused by manual analysis, and continuously improve the accuracy of intrusion detection.

The built-in antivirus content-based detection engine (CDE) powered by intelligence technologies can detect unknown threats and provide in-depth data analysis. With these capabilities, the CDE-boosted firewall is able to gain insight into threat activities and quickly detect malicious files, effectively improving the threat detection rate.

USG supports to detect and defend malware spreading and network attacks, like Worm, Virus, Trojan-horse, Spyware, etc. malware spreading and botnet, DoS/DDoS, SQL injection, cross site attack, ransomware, etc.

2024-11-18 Page 2 of 18

#### Simplified O&M

The HiSecEngine USG6500F series provides a brand-new web UI, which intuitively visualizes threats as well as displays key information such as device status, alarms, traffic, and threat events. With multi-dimensional data drilling, the web UI offers optimal user experience, enhanced usability, and simplified O&M.

The HiSecEngine USG6000F series firewalls can be centrally managed by the security management platform SecoManager, implementing a shift from single-point defense to collaborative network protection. The SecoManager provides policy tuning and intelligent O&M capabilities. It can also manage security products, such as anti-DDoS devices to quickly eliminate network threats and improve security handling effectiveness.

The HiSecEngine USG6500F series NGFW can also be managed by NCE-Campus, and NCE-Campus can also support to manage switch, AR, POL device at the same time, even third party devices.

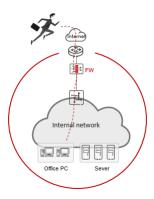

# A wide range of network features

Huawei HiSecEngine USG6500F series also provides various network features such as VPN, IPv6, and intelligent traffic steering.

 Provides various VPN features such as IPsec VPN and SSL VPN, and supports multiple encryption algorithms, such as DES, 3DES, AES, and SHA, ensuring secure and reliable data transmission.

2024-11-18 Page 3 of 18

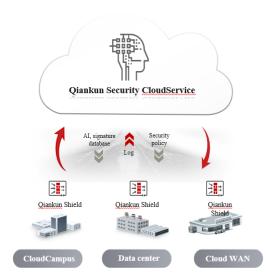

- Provides secure and rich IPv6 network switchover, policy control, security protection, and service visualization capabilities, helping government, media, carrier, Internet, and finance sectors implement IPv6 reconstruction.
- Provides dynamic and static intelligent traffic steering based on multi-egress links, selects
  the outbound interface based on the specified link bandwidth, weight, or priority,
  forwards traffic to each link based on the specified traffic steering mode, and dynamically
  tunes the link selection result in real time to maximize the usage of link resources and
  improve user experience.
- Most threats and attacks come from network traffic. Firewalls are deployed at the egress
  of the local network to interwork with Huawei Qiankun security cloud service to
  implement automatic threat analysis and handling. This ensures the interconnection
  between the intranet and extranet, effectively intercepts traffic attacks, and automatically
  handles external attack sources. Protects enterprise network resources.

#### Collaboration with Huawei Qiankun Security Cloud Service

Most threats and attacks come from network traffic. Firewalls are deployed at the egress
of the local network to interwork with Huawei Qiankun security cloud service to
implement automatic threat analysis and handling. This ensures the interconnection
between the intranet and extranet, effectively intercepts traffic attacks, and automatically
handles external attack sources. Protects enterprise network resources.

2024-11-18 Page 4 of 18

#### Precise detection

 IPS/Anti-virus detection : real-time detection and blocking by Qiankun Shield, 22000+ IPS signature database, default blocking rate of up to 85%

#### Automatic analysis

 AI analysis: intelligent aggregation and analysis of massive logs based on 10+ expert models on the cloud, and identifies threats in seconds

#### Fast closed-loop handling

- Correlation analysis for source tracing: cloud-based multi-dimensional correlation analysis
  of threat intelligence, and implementing precise attack source tracing
- Automatic closed-loop handling: real-time alarms about compromised hosts, external attack source blocking in minutes, with an overall automatic handling rate of 96%

#### Optimal experience

- · Periodic security reports: automatically sending weekly and monthly reports to users
- · Emergency notification: risk notifications to users through SMS, email
- · Visualized management : real-time security situation dashboard
- By associating with Huawei Qiankun security cloud service, the firewall can obtain security services such as border protection and response on demand. Lightweight deployment and unified cloud O&M effectively reduce hardware stacking and greatly reduce enterprise security investment and O&M difficulties.

# 2 Deployment

#### Small data center border protection

- Firewalls are deployed at egresses of data centers, and functions and system resources
  can be virtualized. The firewall has multiple types of interfaces, such as 10G (SFP+), GE
  (RJ45) and GE(SFP) interfaces. Services can be flexibly expanded without extra interface
  cards.
- The intrusion prevention capability effectively blocks a variety of malicious attacks and delivers differentiated defense based on virtual environment requirements to guarantee data security.
- VPN tunnels can be set up between firewalls and mobile workers and between firewalls and branch offices for secure and low-cost remote access and mobile working.

### **Enterprise border protection**

- Firewalls are deployed at the network border. The built-in traffic probe can extract packets of encrypted traffic to monitor threats in encrypted traffic in real time.
- The policy control and data filtering functions of the firewalls are used to monitor social network applications to prevent data breach and protect enterprise networks.

# **4 Software Features**

Feature	Description
Integrated protection	Integrates firewall, VPN, intrusion prevention, antivirus, bandwidth management, Anti-DDoS, URL filtering; provides a global configuration view; manages policies in a unified manner.
Application	Identifies over 6,000 applications and supports the access control

2024-11-18 Page 6 of 18

Feature	Description
identification and control	granularity down to application functions; combines application identification with intrusion detection, antivirus, and data filtering, improving detection performance and accuracy.
	(The desktop model USG6500F-D/USG6500F-DL/USG6500F-DPLsupport 1,500+ applications.)
Intrusion prevention and web protection	Obtains the latest threat information in a timely manner for accurate detection and defense against vulnerability-based attacks. Supports coverage of tens of thousands of Common Vulnerabilities and Exposures (CVE). Detects malicious traffic, such as vulnerability attack traffic, web attack traffic (such as SQL injection and cross-site scripting attacks), botnets, remote control, and Trojan horses, and supports brute-force attack detection. Supports 12,000+ IPS signatures, and supports user-defined signatures. The default IPS blocking rate is up to 85%. Supports brute-force cracking detection based on user behaviors, and user-defined statistical periods.
	(The desktop model USG6500F-D/USG6500F-DL/USG6500F-DPLsupport 5,000+ IPS signature,the USG6585F&USG6585F-B support 22,000+ IPS signatures.)
Anti-botnet	Supports detecting Botnet traffic by using the intrusion prevention function.
Antivirus	Supports intelligent, heuristic antivirus engine that can detect hundreds of millions of virus variants. Supports virus detection for files using protocols such as HTTP/FTP/SMTP/POP3/IMAP4/NFS/SMB. Detects Trojan horses, worms, spyware, vulnerability exploit programs, adware, hacker tools, rootkits, backdoors, grayware, botnet programs, ransomware, phishing software, mining software, and web shell programs. Supports virus detection for various file types, such as Office documents, executable files (Windows/Linux/MacOS), script files, Flash files, PDF files, RTF files, web pages, and images. Supports attack evidence collection. Supports virus detection for a maximum of 100 layers of compressed files, including tar, gzip, zip, rar, and 7z files.
Bandwidth management	Manages per-user and per-IP bandwidth based on service application identification, ensuring the network experience of key services and users. The management and control can be implemented by limiting the maximum bandwidth, guaranteeing the minimum bandwidth, and changing the application forwarding priority.
URL filtering	Provides a URL category database with over 500 million URLs and accelerates access to specific categories of websites, improving access experience of high-priority websites.  Supports DNS filtering, in which accessed web pages are filtered based on domain names.  Supports the anti-phishing URL filter.

2024-11-18 Page 7 of 18

Feature	Description					
Industrial control security	Supports management and control of 27 industrial control application protocols, such as Modbus, DNP3, IEC 60870-5-104, IEC 61850, OPC, S7, CIP, and PROFINET; supports intrusion detection and blocking for more than 100 industrial control systems: SCADA/Engineering/MES/HMI/PLC signature detection and blocking to reduce intrusion risks of known vulnerabilities.  (The desktop model USG6500F-D/USG6500F-DL/USG6500F-DPL does not support industrial control security.)					
Intelligent uplink selection	Supports service-specific PBR and intelligent uplink selection based on multiple load balancing algorithms (for example, based on bandwidth ratio and link health status) in multi-egress scenarios.					
VPN encryption	Supports multiple highly available VPN features, such as IPsec VPN, SSL VPN and GRE.					
SSL-encrypted traffic detection	Detects and defends against threats in SSL-encrypted traffic using application-layer protection methods, such as intrusion prevention, antivirus, data filtering, and URL filtering.					
cci (ii ii	Replaces servers to implement SSL encryption and decryption, effectively					
SSL offloading	reducing server loads and implementing HTTP traffic load balancing.					
Anti-DDoS	Defends against over 20 types of single-packet attacks and over 10 types of DDoS attacks, such as SYN flood, UDP flood, ICMP flood, HTTP flood, HTTPS flood, DNS flood, and SIP flood.  (Note: Desktop models USG6500F-D, USG6500F-DL and USG6500F-DPL do not support the Anti-DDoS functions.)					
Security virtualization	Supports virtualization of multiple types of security services, including firewall, intrusion prevention, antivirus, and VPN. Users can separately conduct personal management on the same physical device.					
Security policy management	Manage and control traffic based on VLAN IDs, quintuples, security zones, regions, applications, URL categories, and time ranges, and implements integrated content security detection.  Provides predefined common-scenario defense templates to facilitate security policy deployment.  Provides security policy management solutions in partnership with Firemon and AlgoSec to reduce O&M costs and potential faults.					
Routing	Supports multiple types of routing protocols and features, such as RIP, OSPF, BGP, IS-IS, RIPng, OSPFv3, BGP4+, and IPv6 IS-IS.					
SRv6	IS-IS for SRv6、SRv6 TE Policy、SRv6 SRH compressing SRv6 BGP、SRv6 BE、SRv6 BE SBFD、SRv6 TI-LFA FRR、SRv6 intermediate node protection、SRv6 Anti-Micro-Ring、SRv6 OAM、					

2024-11-18 Page 8 of 18

Feature	Description
	EVPN L3VPN
	(Desktop model USG6500F-D/USG6500F-DL/USG6500F-DPL does not support SRv6)
	Built-in secure SD-WAN solution to build low-cost, business-grade Internet links
	ZTP one-click deployment (email), zero skill requirements, and device provisioning in minutes
Secure SD-WAN	FEC is supported. No artifact or frame freezing occurs when the video packet loss rate reaches 30%. Link selection based on link quality and real-time link switchover ensure the experience of key applications.
	Multi-link routing and dual-CPE flexible networking ensure that site services are not interrupted. End-to-end IPSec encryption, secure and reliable devices, and secure service transmission
	USG6500F series can be a spoke.
Deployment and reliability	Supports transparent, routing, and hybrid working modes and high availability (HA), including the Active/Active and Active/Standby modes.
Server load balancing	Supports IPv6, L4/L7 server load balancing, and multiple session persistence methods based on source IP addresses and HTTP cookies; supports SSL offloading and encryption; supports combination of services and security policies for effective service security enhancement; supports health check based on multiple protocols, such as TCP, RADIUS, DNS, and HTTP, to detect server status changes in a timely manner.
Asset management	Provides asset-based threat visualization, which supports associating IPS and Antivirus threat logs with user assets and displaying asset risk assessment results.
PPPoE	Functions as a PPPoE client to provide Internet access services, including user authentication and authorization and dynamic IP address allocation.
Behavior and content	Audits and traces the sources of the accessed content based on users
User authentication	Supports multiple user authentication modes, including local portal authentication and SSO. In local Portal authentication, the built-in Portal page of the device can be pushed, and the accounts and passwords entered by users on the Portal page are pushed to the local database or RADIUS, HWTACACS, AD, or LDAP authentication server for authentication. SSO includes RADIUS SSO and Agile Controller (NCE-Campus) SSO.

# 7 Ordering Information

#### Note:

- 1、The ordering information of USG6510F-DL/USG6530F-D/USG30F-DL is the same as USG6510F-D
- 2、The ordering information of USG6530F-DPL is the same as USG6530F-DPL
- 3. The license information of USG6555F/USG6565F/USG6585F-B is the same as USG6525F
- 4、 The four models USG6510F-D/USG6530F-D/USG6555F/USG6585F support Qiankun Security Cloud Service

Product	Model	Description
USG6510F-D	USG6510F-D-AC	USG6510F-D AC host (10*GE RJ45+2*GE SFP,1*Adapter)
USG6510F- DPL	USG6510F-DPL-AC	USG6510F-DPL AC Host(4*GE SFP+8*GE RJ45+ LTE, 1*Adapter, include SSL VPN 100 users); Supports PoE/PoE+/PoE++, Maximum power supply capability:150W.
USG6525F	USG6525F-AC	USG6525F AC host (2*GE RJ45 + 8*GE COMBO + 2*10GE SFP+, 1 AC power)
	USG6525F-DC	USG6525F DC host (2*GE RJ45 + 8*GE COMBO + 2*10GE SFP+)
